Downtime Workstation Keyboards & Mice

Add a red Petite Mouse for an easily identifiable workstation

When seconds count, find the computer with the EMR software that will work in the case of server outages or other emergency situations

If your hospital uses Downtime Workstations for your EMR software, then this specialty Medical Grade™ keyboard is a must. This red keyboard will immediately let staff know which workstation is available during planned and emergency server outages. No little red stickers for doctors and nurses to try and locate. This keyboard eliminates confusion and acts as a bright red beacon during hectic downtime situations. The Downtime Workstation Keyboard is identical to the Really Cool Keyboard with the added feature of a red design with big bold “Downtime Workstation” lettering for easy identification. The firmware is also enhanced with Cool Connect, to help identify if the keyboard’s USB has been disconnected. Tru-Lock feature is included for cleaning and disinfecting at the workstation. Pair with a red Petite Mouse and a red monitor bezel and you have the solution you’ve been waiting for.
